## Taps

As with our water softeners we only stock top quality products which offer our customers excellent long term service.

Most of our customers use soft water for drinking and preparing food ( perfectly legal and safe) but if you wish to have a hard water tap we recommend that you either have fitted an extra separate filter tap normally on the side of your existing sink or a three way tap which delivers soft and hard water. This replaces your existing sink tap which is normally heavily damaged with scale so it is an excellent opportunity while you have qualified engineers in your home to have the tap changed.

**Please remember to that some taps are really not suitable for old gravity fed hot water systems ( if you have a copper cylinder )**

## Filters and Purifiers

If you choose any of our filter taps or three way taps and they are being fitted by us as part of a water softener installation you are entitled to a free water basic filter. This is a small cartridge that fits in the unit below and remove chlorine etc , this greatly improves the flavour of the water.

We also offer a whole range of filters and systems that can remove all traces of bugs, metals and insecticides from your water leaving it nearly 100% pure.

Our latest purifier even super hydrogenates the water to aid in reducing free radicals

**Drop in and taste our range of waters**

## STAND ALONE FAUCETS

basic

**FROM £ 19.99**

6 in1 Quarter Turn

**FROM £ 52.00**

Italian Style Quarter Turn
